

API Design Documentation

1. User endpoints:

- POST /users: create a new user account
- GET /users/{userId}: get user details by user ID
- PUT /users/{userId}: update user details by user ID
- DELETE /users/{userId}: delete user account by user ID
- GET /users/{userId}/questions: get all questions posted by a user
- GET /users/{userId}/answers: get all answers posted by a user
- GET /users/{userId}/comments: get all comments posted by a user
- GET /users/{userId}/votes: get all votes casted by a user
- POST /users/{userId}/follow: follow a user
- POST /users/{userId}/unfollow: unfollow a user

-
-

• Question endpoints:

- GET /questions: Get a list of all questions.
- GET /questions/{questionId}: Get details of a specific question by ID.
- POST /questions: Create a new question.
- PUT /questions/{questionId}: Update an existing question.
- DELETE /questions/{questionId}: Delete a question by ID.
- GET /questions/{questionId}/answers: Get a list of all answers to a specific question by ID.
- GET /questions/{questionId}/answers/{answerId}: Get details of a specific answer to a specific question by ID.
- POST /questions/{questionId}/answers: Post a new answer to a specific question.
- PUT /questions/{questionId}/answers/{answerId}: Update an existing answer to a specific question.
- DELETE /questions/{questionId}/answers/{answerId}: Delete an answer to a specific question by ID.
- GET /questions/{questionId}/answers/sorted: Get a list of all answers to a specific question sorted by upvotes.

-

• Answer endpoints:

- POST /questions/{questionId}/answers: post a new answer to a question
- GET /questions/{questionId}/answers/{answerId}: get an answer by answer ID

- PUT /questions/{questionId}/answers/{answerId}: update an answer by answer ID
- DELETE /questions/{questionId}/answers/{answerId}: delete an answer by answer ID
- GET /questions/{questionId}/answers/{answerId}/comments: get all comments on an answer
- POST /questions/{questionId}/answers/{answerId}/vote: vote on an answer
- **Comment endpoints:**
 - POST /questions/{questionId}/comments: post a new comment on a question
 - POST /questions/{questionId}/answers/{answerId}/comments: post a new comment on an answer
 - GET /questions/{questionId}/comments/{commentId}: get a comment by comment ID
 - PUT /questions/{questionId}/comments/{commentId}: update a comment by comment ID
 - DELETE /questions/{questionId}/comments/{commentId}: delete a comment by comment ID
 -
 -
- **Tag endpoints:**
 - POST /tags: create a new tag
 - GET /tags: get all tags
 - GET /tags/{tagId}: get a tag by tag ID
 - PUT /tags/{tagId}: update a tag by tag ID
 - DELETE /tags/{tagId}: delete a tag by tag ID
 - GET /tags/{tagId}/questions: get all questions with a specific tag
 -
- **Vote endpoints:**
 - POST /votes: create a new vote. Request body should contain the user ID, post ID, post type, and vote type.
 - GET /votes/{voteId}: get details of a specific vote.
 - PUT /votes/{voteId}: update the details of a specific vote. Request body should contain the updated vote type.
 - DELETE /votes/{voteId}: delete a specific vote.
 - GET /answers/{answerId}/votes: get all votes for a specific answer, sorted by upvotes.
 - GET /questions/{questionId}/votes: get all votes for a specific question, sorted by upvotes.
