ARCHITECTURE DESIGN

Frontend

We have created a user interactive and responsive frontend using HTML, CSS , Javascript. The website is intended to provide a platform for creating and sharing coding related queries and its solutions.

Backend

We have used MySQL, Flask and its libraries such as flask mail flask login, threading libraries for sending emails, jwt for generating tokens ,. In addition to, we have also used keywor extraction ML-API provided by amazon for search feature.

```
mysql> select * from users;
```

user_id	passcode	username	email_id	creation_date	profile_image_url	reputation	about	badge
1	rajaprism	rajaprism	rajaprismsagar001@gmail.com	2023-04-25 15:54:14	Screenshot 2023-04-25 at 1.27.21 PM.png	0	My name is Raja Kumar	bronze

```
mysql> select * from questions;
```

question_id	title	body	answer_id	user_id	score	creation_date
1	What is the use of flask-login	could you please explain what is the use of flask-login module in python	NULL	1	0	2023-04-25 15:57:23

```
mysql> select * from answers;
```

answer_id	body	question_id	user_id	score	creation_date	comment_count	upvotes	downvotes
1	It is used basically to handle user authentication and make userlogin through complete	1	1	0	2023-04-25 15:58:28	0	0	0

```
mysql> insert into question_votes (user_id,question_id) values(1,1);
Query OK, 1 row affected (0.00 sec)
```

```
mysql> select * from questoin_votes;
ERROR 1146 (42S02): Table 'bugsearch.questoin_votes' doesn't exist
mysql> select * from question_votes;
```

vote_type	question_id	user_id
neutral	1	1
